Spotlight on the ERC – Funding high quality research

The European Research Council (ERC) supports ground-breaking research and scientific excellence in all fields through funding.

Set up in 2007 with a goal to challenge the brightest minds in Europe and spark new scientific and technological discoveries to drive the future, the council continues to push research forward.

Are you an inquisitive researcher? Do you believe your current, or future, research project could lead to new discoveries, and needs funding to help you and your team realise that?

Start your application now, you might join our circle of globally recognised and awarded grantees.

Though the rate of successful ERC grant applications is low, it could help you open new doors and opportunities, such as state funding, that could later lead to an ERC fund.

The only criterion is excellence, but the ERC also helps recognise and reward untapped potential.

Interested in knowing more about the ERC, its grant opportunities and how to apply, take a look at the following resources:

- [ERC video introduction](#) → understand ERC grant opportunities
- ERC grant opportunities: <https://erc.europa.eu/funding>
